

IDACORP ENERGY, L.P.

Order No. EA-244

I. BACKGROUND

Exports of electricity from the United States to a foreign country are regulated and require authorization under section 202(e) of the Federal Power Act (FPA) (16 U.S.C. §824a(e)).

On March 30, 2001, the Office of Fossil Energy (FE) of the Department of Energy (DOE) issued FE Order No. EA-233 authorizing Idaho Power Company (IPC) to export electric energy to Mexico as a power marketer. On , June 13, 2001, IPC and IDACORP Energy L.P. (IELP) jointly applied to DOE to transfer the export authority contained in FE Order No. EA-233 from IPC to IELP. Both IPC and IELP are wholly owned subsidiaries of IDACORP, Inc. In their application, IPC and IELP assert that, as a result of corporate restructuring, IELP will now perform the power marketing functions previously performed by IPC.

IELP will generate the power to be exported or purchase it from electric utilities and Federal power marketing agencies within the United States. The energy to be exported will be delivered to Mexico over the international electric transmission facilities owned and operated by Comision Federal de Electricidad (CFE), the national electric utility of Mexico, Central Power & Light Company (CPL), El Paso Electric Company (EPE) and San Diego Gas & Electric Company (SDG&E).

Notice of the IELP export application was placed in the *Federal Register* on July 18 , 2001, (66 FR37461) requesting that comments, protests, and petitions to intervene be submitted to the DOE by August 17, 2001. None were received.

II. DISCUSSION and ANALYSIS

The authority requested of DOE by IELP is a necessary condition for exporting under section 202(e) of the FPA. IELP must make the necessary commercial arrangements, including obtaining all necessary transmission access required to wheel the exported energy to the foreign purchaser, and obtain any and all other regulatory approvals which may be required in order to effect the export. In considering the IELP request for service, the transmitting utilities would have to assess the electric reliability impacts of moving the export through their system and, presumably, would only provide service under terms and conditions that would not cause reliability problems on their system.

An export authorization issued under section 202(e) does not impose on transmitting utilities a requirement to provide service. However, DOE expects transmitting utilities owning border facilities to provide access across the border in accordance with the principles of

comparable open access and non-discrimination contained in the FPA and articulated in Federal Energy Regulatory Commission (FERC) Order No. 888, (Promoting Wholesale Competition Through Open Access Non-Discriminatory Transmission Services by Public Utilities; FERC Stats. & Regs. ¶31,036 (1996)), as amended. The actual rates, terms and conditions of transmission service shall be consistent with the non-discrimination principles of the FPA and the transmitting utility's Open Access Transmission Tariff on file with the FERC.

All recipients of export authorizations, including owners of border facilities for which Presidential permits have been issued, are required by their export authorization to conduct operations in accordance with the principles of the FPA and pertinent rules, regulations and orders, which include the comparable open access provisions of FERC Order No. 888, as amended. Cross-border electric trade ought to be subject to the same principles of comparable open access and non-discrimination that apply to transmission in interstate commerce. (See Enron Power Marketing, Inc., 77 FERC ¶ 61,013 (1996)). Thus, DOE expects owners of border facilities to comply with the same principles of comparable open access and non-discrimination that apply to the domestic interstate transmission of electricity.

Before an electricity export authorization is granted, DOE must find that the proposed export will not impair the sufficiency of electric supply within the U.S. and that it will not impede the coordinated use of regional transmission facilities. DOE has always used a flexible approach in determining the information necessary to evaluate reliability impacts for specific export proposals. In determining reliability impact for exports by power marketers or other entities operating in a similar manner, DOE has used a combination of established industry guidelines, operating procedures and/or infrastructure, as well as technical studies supporting authorizations issued for traditional entities operating at the border. Allowing these existing technical studies to suffice in this docket is sound and, thus, DOE need not perform additional reliability assessments here, provided the maximum rate of transmission for all exports through a border system does not exceed the previously authorized limit of the system.

III. FINDING

DOE has assessed the impact that the proposed export would have on the reliability of the U.S. electric power supply system. Based on the above discussion and analysis, DOE has determined that the export of electric energy to Mexico as requested by IELP would not impair the sufficiency of electric power supply within the United States and would not impede or tend to impede the coordination in the public interest of facilities provided that, for exports through the system of SDG&E, IELP coordinate exports with SDG&E and/or the control area operator or Independent System Operator (ISO), as appropriate, such that total exports across the SDG&E/CFE interconnection are in conformity with the operating limitations established by the SDG&E/CFE operating nomogram and the

Southern California Import Transmission Nomogram. For exports through the system of EPE, IELP shall coordinate such exports with EPE and/or the control area operator or ISO, as appropriate, such that total exports across the EPE/CFE interconnection are in conformity with the requirements of the Southern New Mexico Import nomogram that governs the amount of imports allowed into the Southern New Mexico area. These nomograms are on file in the Office of Fossil Energy for public review.

The circumstances described in the IELP application are virtually identical to those for which export authority had previously been granted in FE Order No. EA-233. Consequently, DOE believes that it has adequately satisfied its responsibilities under the National Environmental Policy Act of 1969 through the documentation of a categorical exclusion in the FE Docket EA-233 proceeding.

DOE also has determined that this action is among those classes of actions not normally requiring preparation of an environmental assessment or an environmental impact statement and, therefore, is eligible for categorical exclusion under Appendix B to Subpart D, paragraph B4.2 of the revised DOE Regulations implementing the National Environmental Policy Act of 1969. Specifically, this categorical exclusion is provided for the export of electric energy using existing transmission facilities. Documentation of the use of this categorical exclusion has been placed in this Docket

IV. ORDER

Based on the above, it is hereby ordered that IELP is authorized to export electric energy to Mexico under the following terms and conditions:

(A) The electric energy exported by IELP pursuant to this Order may be delivered to Mexico only over the following existing international transmission facilities:

<u>Owner</u>	<u>Location</u>	<u>Voltage</u>	<u>Presidential Permit No.</u>
San Diego Gas & Electric	Miguel, CA Imperial Valley, CA	230 kV 230 kV	PP-68 PP-79
El Paso Electric Company	Diablo, NM Ascarate, TX	115 kV 115 kV	PP-92 PP-48
Central Power & Light Company	Brownsville, TX	138 kV 69-kV	PP-94
Comision Federal de Electricidad	Eagle Pass, TX Laredo, TX Falcon Dam, TX	138 kV 138 kV 138 kV	PP-50 PP-57 None

(B) Exports authorized herein shall not cause a violation of the terms and conditions contained in existing electricity export authorizations associated with the international transmission facilities identified in paragraph (A). Specifically:

(1) Exports made by IELP pursuant to this Order shall not cause the total exports on a combination of the facilities authorized by Presidential Permits PP-68 and PP-79 to exceed an instantaneous transmission rate of 400 megawatts (MW). All exports made pursuant to this Order must be consistent with the operating limitations established by the SDG&E/CFE operating nomogram and the Southern California Import Transmission Nomogram.

(2) Exports made by IELP pursuant to this Order shall not cause the total exports on a combination of the facilities authorized by Presidential Permits PP-48 and PP-92 to exceed an instantaneous transmission rate of 200 MW. All exports made pursuant to this Order must be consistent with the operating limitations of the Southern New Mexico Import Nomogram.

(3) Exports by IELP shall not cause the total exports on a combination of the 138 kV facilities at the Falcon Dam and the facilities authorized by Presidential Permits PP-50, PP-57, and PP-94 to exceed an instantaneous transmission rate of 600 MW during those times when the CPL system is at a minimum load condition. During all other load conditions on the CPL system, exports by IELP over the facilities identified in this subparagraph shall not cause the maximum rate of transmission to exceed:

(a) 300 MW for the 138 kV and 69 kV facilities authorized by Presidential Permit PP-94; or,

(b) 50 MW total for the 138 kV facilities at Falcon Dam and those authorized by Presidential Permits PP-50 and PP-57.

(C) Amendment of the export authorizations from which the export limits contained in subparagraphs (B)(1) through (B)(3) were derived shall result in a concomitant change to the export limits contained in those subparagraphs. Notice will be provided to IELP of any amendments to existing export authorizations that would impact on this Order.

(D) IELP may commence exports only over those international transmission lines identified in paragraph (A) for which IELP provides DOE written evidence that sufficient transmission service has been obtained for delivery of the exported energy to the border. This evidence can consist of signed letters of agreement for the service between IELP and each Presidential permit holder and should identify specific facilities by name and Presidential permit number.

(E) In scheduling the delivery of electricity exports to Mexico, IELP shall comply with all reliability criteria, standards, and guides of the North American Electric Reliability Council, Regional Councils, or

independent system operators, as appropriate on such terms as expressed therein, and as such criteria, standards, and guides may be amended from time to time.

(F) IELP shall conduct all operations pursuant to the authorization hereby granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations, and orders adopted or issued thereunder, including the comparable open access provisions of FERC Order No. 888, as amended.

(G) The authorization herein granted may be modified from time to time or terminated by further order of the DOE, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential permits referred to in paragraph (A).

(H) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in such State or State regulatory commission.

(I) IELP shall make and preserve full and complete records with respect to the electric energy exported to Mexico. IELP shall furnish quarterly reports to the DOE, within 30 days following each calendar quarter, detailing for each month of the previous quarter: (1) the gross amount of electricity delivered, in kilowatt hours; (2) the consideration received for such energy; and (3) the maximum hourly rate of transmission, in kilowatts. Quarterly reports must be filed regardless of current activity and whether or not deliveries of electric energy have been made. If no transactions have been made, a one-sentence report indicating "no activity" for the previous quarter is sufficient.

Reports shall be submitted to the U.S. Department of Energy, Office of Fossil Energy, FE-27, 1000 Independence Avenue, SW, Washington, D.C. 20585-0305. Properly identified quarterly reports will also be accepted via facsimile at (202) 287-5736 to meet time requirements, but original copies should still be filed at the above address.

(J) In accordance with 10 C.F.R. §205.305, this authorization is not transferable or assignable, except in the event of the involuntary transfer of this authority by operation of law. Provided written notice of the involuntary transfer is given DOE within 30 days, this authorization shall continue in effect temporarily. This continuance also is contingent on the filing of an application for permanent authorization within 60 days of the involuntary transfer; the authorization shall then remain effective until a decision is made on the new application. In the event of a proposed voluntary transfer of this authority to export electricity, the transferee and the transferor shall file jointly an application for a new export authorization, together with a statement of reasons for the transfer.

(K) Exports authorized herein shall be reduced or suspended, as appropriate, whenever a continuation of those exports would impair or tend to impair the reliability of the U.S. electric power supply system.

(L) This authorization shall be effective for a period of two (2) years from the date of this order. Application for renewal of this authorization may be filed within six months prior to expiration of this authorization.

(M) The electricity export authorization issued to IPC on March 30, 2001, by FE Order No. EA-233 is hereby rescinded.

Issued in Washington, D.C., on September 6, 2001.
